

# Introduction to Computer Graphics

GAMES101, Lingqi Yan, UC Santa Barbara

## Lecture 12: Geometry 3

# Announcements

- Homeworks
  - Enjoying HW3?
  - HW1 submission window reopened (similar policy applies to later HWs)
- The T/N/B calculation
  - Will be in the next lectures [local shading frame]
- BIG NEWS!
  - Computer Graphics won the Turing Award after 32 years!

# Turing Award Winners

- Made Computer Graphics great
- We will soon learn about their work!

Ed Catmull

Pat Hanrahan

# Academic Family Tree

Pat Hanrahan @ Stanford

Ravi Ramamoorthi @ UCSD

Lingqi Yan @ **UCSB**

Pradeep Sen @ **UCSB**

Back to Geometry

# Mesh Operations: Geometry Processing

- Mesh subdivision
- Mesh simplification
- Mesh regularization

# Mesh Subdivision (upsampling)

Increase resolution

# Mesh Simplification (downsampling)

Decrease resolution; try to preserve shape/appearance

# Mesh Regularization (same #triangles)

Modify sample distribution to **improve quality**

Subdivision

# Loop Subdivision

Common subdivision rule **for triangle meshes**

First, create more triangles (vertices)

Second, tune their positions

Simon Fuhrman

# Loop Subdivision

- Split each triangle into four

- Assign new vertex positions according to weights
  - New / old vertices updated differently

# Loop Subdivision — Update

For new vertices:

Update to:  
 $3/8 * (A + B) + 1/8 * (C + D)$

# Loop Subdivision — Update

For old vertices (e.g. degree 6 vertices here):

Update to:

$$(1 - n \cdot u) * \text{original\_position} + u * \text{neighbor\_position\_sum}$$

**n: vertex degree**

**u:  $\frac{3}{16}$  if  $n=3$ ,  $\frac{3}{(8n)}$  otherwise**

# Loop Subdivision Results

# Catmull-Clark Subdivision (General Mesh)

Non-quad face

Extraordinary  
vertex (奇异点)  
(degree  $\neq 4$ )

**Each subdivision step:**  
Add vertex in each face  
Add midpoint on each edge  
Connect all new vertices

# Catmull-Clark Subdivision (General Mesh)

After one subdivision:  
How many extraordinary vertices?  
What are their degrees?  
How many non-quad faces?

# Catmull-Clark Subdivision (General Mesh)

# Catmull-Clark Subdivision (General Mesh)

# FYI: Catmull-Clark Vertex Update Rules (Quad Mesh)

$$f = \frac{v_1 + v_2 + v_3 + v_4}{4}$$

$$e = \frac{v_1 + v_2 + f_1 + f_2}{4}$$

Vertex point

$$v = \frac{f_1 + f_2 + f_3 + f_4 + 2(m_1 + m_2 + m_3 + m_4) + 4p}{16}$$

$m$  midpoint of edge  
 $p$  old "vertex point"

# Convergence: Overall Shape and Creases

Loop with Sharp Creases

Catmull-Clark with Sharp Creases

Figure from: Hakenberg et al. Volume Enclosed by Subdivision Surfaces with Sharp Creases

# Subdivision in Action (Pixar's "Geri's Game")

# Mesh Simplification

# Mesh Simplification

Goal: reduce number of mesh elements while maintaining the overall shape

**30,000 triangles**

**3,000**

**300**

**30**

How to compute?

# Collapsing An Edge

- Suppose we simplify a mesh using **edge collapsing**

# Quadric Error Metrics

(二次误差度量)

- How much geometric error is introduced by simplification?
- Not a good idea to perform local averaging of vertices
- Quadric error: new vertex should minimize its **sum of square distance** (L2 distance) to previously related triangle planes!

[http://graphics.stanford.edu/courses/cs468-10-fall/LectureSlides/08\\_Simplification.pdf](http://graphics.stanford.edu/courses/cs468-10-fall/LectureSlides/08_Simplification.pdf)

# Quadric Error of Edge Collapse

- How much does it cost to collapse an edge?
- Idea: compute edge midpoint, measure quadric error

- Better idea: choose point that minimizes quadric error
- More details: Garland & Heckbert 1997.

# Simplification via Quadric Error

Iteratively collapse edges

Which edges? Assign score with quadric error metric\*

- approximate distance to surface as sum of distances to planes containing triangles
- iteratively collapse edge **with smallest score**
- greedy algorithm... great results!

\* (Garland & Heckbert 1997)

# Quadric Error Mesh Simplification

**5,804**

**994**

**532**

**248**

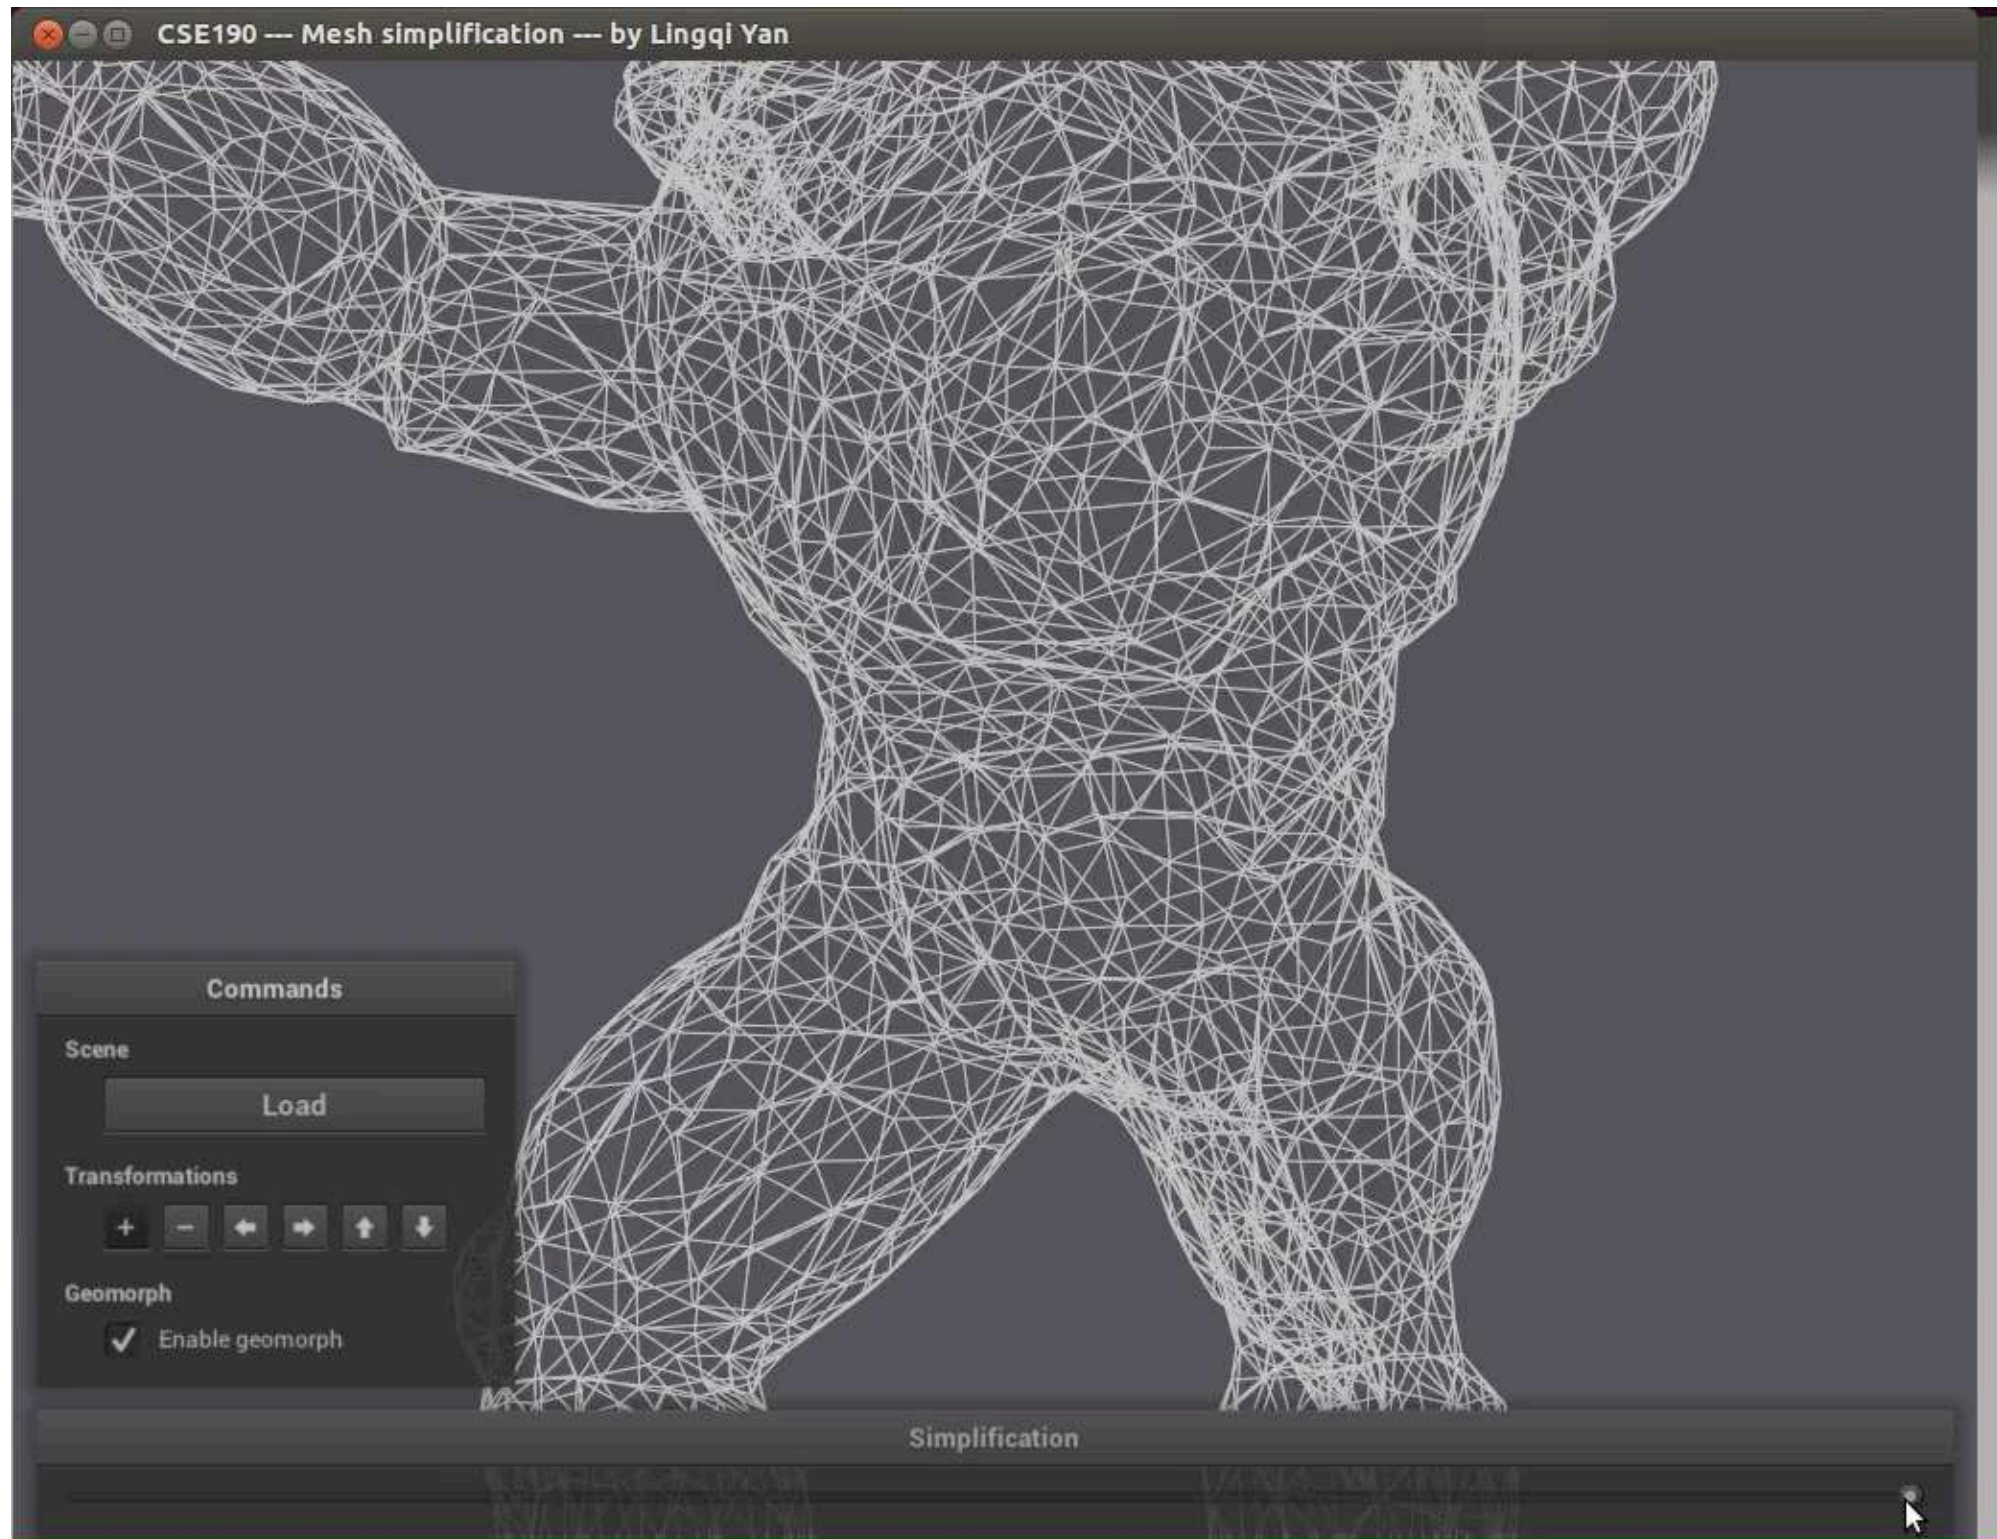

**64**

Garland and Heckbert '97

# Quadric Error Mesh Simplification

# Before we move on...

- Shadows
  - How to draw shadows using rasterization?
  - **Shadow mapping!**

Shadow of the Tomb Raider, 2018

# Shadow Mapping

- An Image-space Algorithm
  - no knowledge of scene's geometry during shadow computation
  - must deal with aliasing artifacts
- Key idea:
  - the points NOT in shadow must be seen both **by the light** and **by the camera**

# Pass 1: Render from Light

- Depth image from light source

# Pass 1: Render from Light

- Depth image from light source

# Pass 2A: Render from Eye

- Standard image (with depth) from eye

# Pass 2B: Project to light

- Project visible points in eye view back to light source

(Reprojected) depths match for light and eye. VISIBLE

# Pass 2B: Project to light

- Project visible points in eye view back to light source

(Reprojected) depths from light and eye are not the same. **BLOCKED!!**

# Visualizing Shadow Mapping

- A fairly complex scene with shadows

the point  
light source

# Visualizing Shadow Mapping

- Compare with and without shadows

with shadows

without shadows

# Visualizing Shadow Mapping

- The scene from the light's point-of-view

FYI: from the  
eye's point-of-view  
again

# Visualizing Shadow Mapping

- The depth buffer from the light's point-of-view

FYI: from the  
light's point-of-view  
again

# Visualizing Shadow Mapping

- Comparing  $\text{Dist}(\text{light}, \text{shading point})$  with shadow map

Green is where the  
distance(light,  
shading point)  $\approx$   
depth on the  
shadow map

Non-green is where  
shadows should be

# Visualizing Shadow Mapping

- Scene with shadows

# Shadow Mapping

- Well known rendering technique
  - Basic shadowing technique for early animations (Toy Story, etc.) and in EVERY 3D video game

Zelda: Breath of the Wild

Super Mario Odyssey

# Problems with shadow maps

- Hard shadows (point lights only)
- Quality depends on shadow map resolution  
(general problem with image-based techniques)
- Involves equality comparison of floating point depth values means issues of scale, bias, tolerance

# Problems with shadow maps

- Hard shadows vs. soft shadows

[RenderMan]
